Absolute Maximum Ratings

Maximum Temperature (10 seconds)	290 °C
(120 seconds)	250 °C
Maximum Voltage, Gate-Source	+/- 110 V
Maximum Voltage, Drain-Source	+/- 100 V

Recommended Application

1. Resistors RS and RD (40 KΩ-100 KΩ) or inductors LS and LD should be used to provide a path to DC Ground from Source and Drain.
2. VG may be of either polarity.
3. VG rise-time should be at least 10 μs for optimal lifetime.
4. Please refer to "Application Note for Test and Handling of SPST RF-MEMS Switches" for more information. Contact us for driver solutions.

**Nominal Device Dimensions**

Dimensions are in micrometers.  
Please contact us for a footprint in .gds or .dxf format.

**Static sensitivity**

This device has an ESD (HBM) sensitivity of 100 V. Use proper ESD precautions when handling. Please refer to "Application Note for Test and Handling of SPST RF-MEMS Switches" for more information.

**Die Assembly**

The gold backside-metallization on the die is designed to be mounted with electrically conductive silver epoxy, or with a lower temperature solder which does not consume gold. Bond pads on the die are made of gold. Ball-bonds should be utilized to attach gold or Aluminum 1 mil wires. Please refer to "Application Note for Test and Handling of SPST RF-MEMS Switches" for more information.
